

Supplementary Figure 1. Establishment of cellular senescence by overexpression of TRF2^{ΔBΔM}. **(a,b)** Growth kinetics **(a)** and SA-β-gal activity **(b)** of BJ cells infected with TRF2^{ΔBΔM}-expressing retrovirus or control virus. Expression of TRF2^{ΔBΔM} was monitored by EGFP translated from an IRES (see **Fig. 1a**). As a control, BJ cells were infected in parallel with a virus expressing EGFP only. Scale bar, 200 μm.
