

Supplementary figure 2: Effects of WIN 55,212-2 (WIN), applied via intraplantar route of administration on inflammation-induced mechanical hypersensitivity in CB1^{-/-} mice and their wild-type littermates (wt). Intraplantar application of WIN (20 or 30 μg) significantly reduces CFA-induced mechanical hypersensitivity in wt mice (n = 5 for each dose), but not in CB1^{-/-} mice (n = 5 for each dose). * indicates p < 0.05 as compared to CFA-induced mechanical hyperalgesia before WIN administration, ANOVA, Fisher's test. All data points represent mean ± S.E. M.
