

Supplemental figure 2

Supplemental Figure 2: Longitudinal comparison of sBCMA levels in nonPD and PD patients

Soluble BCMA (sBCMA in pg/ml on x-axis) levels in serum were measured at time of leukapheresis (apheresis) and days 30 and 100 following CAR T cell infusion (y-axis). In nonPD patients, sBCMA levels decreased significantly compared to baseline samples (apheresis) following CAR T cell infusion. No significant differences between all three timepoints were assessed in PD patients, reflecting no decrease in tumor burden. No loss of BCMA expression was observed in both cohorts. For the calculation of significances Mann-Whitney U test was used. **** $p < 0.0001$, ns = not significant.
