

Supplementary Figure 1: Pellets eaten during Cued-IF and photos of Ctx-IF contexts.

a. Graph depicts the percentage of the total pellets distributed during training sessions that were retrieved and eaten. After the fifth session, mice eat 100% of the pellets given during the session.

b. Photos of the two contexts used to establish context-induced feeding. Contexts clearly differed in shape, floor texture, and position/type of food well. Contexts were also placed in different rooms. Arrows indicate the position of the food well in each context.
