

Supplemental Figure 4. *MAPT* IVS10+16 does not alter zymosan uptake in iMGLs. (A) Phagocytic uptake of zymosan A (*S. cerevisiae*) BioParticles™, Alexa Fluor™ 488 conjugate (0.5 µg/ml) in FTD1 and FTD2 donor pair iMGLs assessed by IncuCyte live cell imaging assay for a period of 24h from substrate addition. (B) 12h timepoint quantification of zymosan area normalized to microglia area are shown for FTD1 and FTD2 donor pair iMGLs. N=8 replicates/line.
