

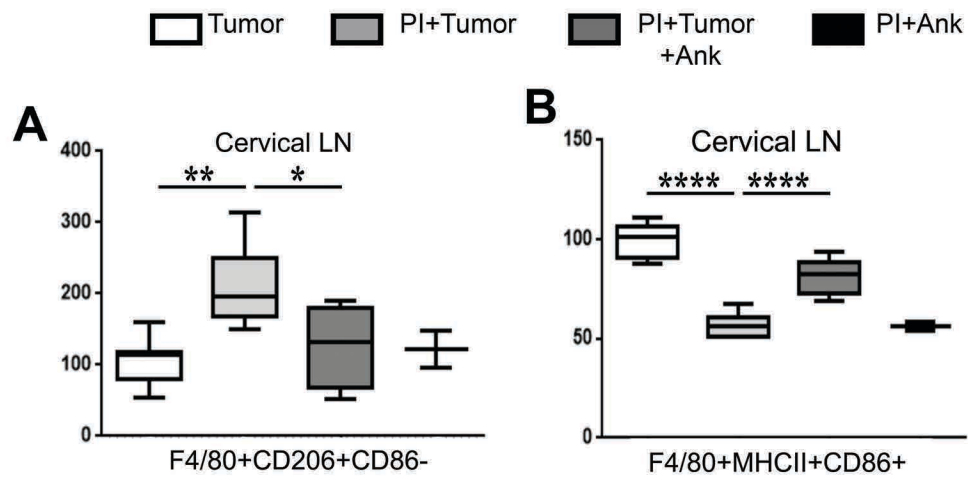

Figure S2. Evaluation of CD86, an M1 costimulatory molecule among macrophages.

(A) CD86⁺ expression was evaluated by FACS in the cervical LN. The levels of F4/80+CD206+CD86⁻ M2 macrophages were significantly elevated in the cervical LN of PI + tumor animals and significantly reduced in the presence of Anakinra. (B) F4/80+MHCII+CD86⁺ M1 macrophages showed an opposite trend (student's t-test, **** P<0.0001).
