

Supplemental Figure S1. Physiologic DBP Inclusion and Exclusion Criteria

*In the analysis of the physiologic cohort, evaluable DBP data from two minutes pre-dose was eligible for inclusion as the pre-dose DBP. All four epochs of data during the minute of administration were excluded from the DBP analysis as the time of administration. Evaluable DBP data in the five minutes of CPR following dose administration were eligible for inclusion until the timing of the next dose of vasopressor.*
