

Supplementary Figure 4. Beta-arrestin-1-2 (ARRB1-2) protein expression in lung ADC and SCC samples in the US Biomax TMA. Scatter plots represent quantitative analysis (VIS score) of IHC results in a section of the US Biomax TMA incubated with an antibody that recognises both beta-arrestin-1 and 2 (beta-arrestin-1-2). “n” indicates the number of subjects in each group. Data points and their median are shown. **** P < 0.0001 using Mann-Whitney Rank Sum test.
