

Supplementary figure 5: Reduction tumorsphere formation of SUM149 cells.

SUM149 cells were treated with either DMSO control, the PDE5 inhibitor MY5445 (10 μ M), the PKG inhibitor KT5823 (10 μ M) or the PKA inhibitor H-89 (5 μ M) under anchorage-independent growth conditions (384 well tumorsphere plates). After 7 days of growth, the number of tumorspheres was determined and normalized to DMSO control. Bars show mean with SD. **** p-value <0.0001, ns-not significant.
