

**Supplementary Table 2. The relationship between Lnc-LALC expression and the clinicopathologic features of CRC samples**

| Characteristics   | Lnc-LALC expression levels |            | P value |
|-------------------|----------------------------|------------|---------|
|                   | Low(n=60)                  | High(n=60) |         |
| Age               |                            |            | >0.05   |
| ≤ 65              | 27                         | 29         |         |
| >65               | 33                         | 31         |         |
| Gender            |                            |            | >0.05   |
| Male              | 37                         | 32         |         |
| Female            | 23                         | 28         |         |
| Tumor size(cm)    |                            |            | >0.05   |
| ≤ 5               | 28                         | 35         |         |
| >5                | 32                         | 25         |         |
| T factor          |                            |            | <0.01   |
| 1 + 2             | 40                         | 17         |         |
| 3 + 4             | 20                         | 43         |         |
| N factor          |                            |            | <0.01   |
| 0                 | 41                         | 10         |         |
| 1+2               | 19                         | 50         |         |
| M factor          |                            |            | <0.01   |
| 0                 | 55                         | 25         |         |
| 1                 | 5                          | 35         |         |
| Vascular invasion |                            |            | <0.05   |
| Yes               | 22                         | 36         |         |
| No                | 38                         | 24         |         |
| Stage             |                            |            | <0.01   |
| I + II            | 43                         | 8          |         |
| III + IV          | 17                         | 52         |         |
| CEA (ng/ml)       |                            |            | <0.01   |
| < 4.7             | 36                         | 14         |         |
| ≥ 4.7             | 24                         | 46         |         |

The median expression level of Lnc-LALC was used as the cutoff
