[illegible]

Western blot analysis of p53 protein levels in H1299 cells. The blot shows p53 protein levels across 12 lanes. Lanes 1-4 are untreated cells, lanes 5-8 are cells treated with 100 nM cisplatin, and lanes 9-12 are cells treated with 100 nM cisplatin plus 100 nM of various inhibitors. Red boxes highlight the p53 bands in lanes 1, 5, 6, and 9.
