

Supplementary information, Fig. S7 Probability density of NDR density during oocyte growth. **(a)** Probability density plots of NDR density at intergenic and intragenic regions in growing mouse oocytes. **(b)** NDR density at introns and exons. **(c)** Probability density plots of NDR density in PMDs (upper panel) and non-PMDs (lower panel) in growing mouse oocytes. **(d)** Probability density plots of NDR density in intergenic PMDs and intergenic non-PMDs in growing mouse oocytes. **(E)** Probability density plots of NDR density at CGIs, HCPs, ICPs and LCPs. P-values were defined by the two-tailed Student's *t*-test.
