

Supplementary information, Fig. S8 Dynamics of NDRs at TSSs and TESs during oocyte maturation. **(a)** Expression levels of genes with both TSS and TES NDRs (Both), genes with only TSS-NDRs (TSS), genes with only TES-NDRs (TES) and genes with no NDR (None) in GOs. **(b)** Analysis of motif enrichment for Tcf12, MyoD, E2A and Ap4 of the TES-NDRs from each stage. **(c)** Classification of genes into 4 groups according to the existence of a TSS-NDR or a TES-NDR in the NGO and FGO stages. The gene expression levels in single oocytes across five stages were shown. P-values were defined by the two-tailed Student's *t*-test.
