

Fig. S15

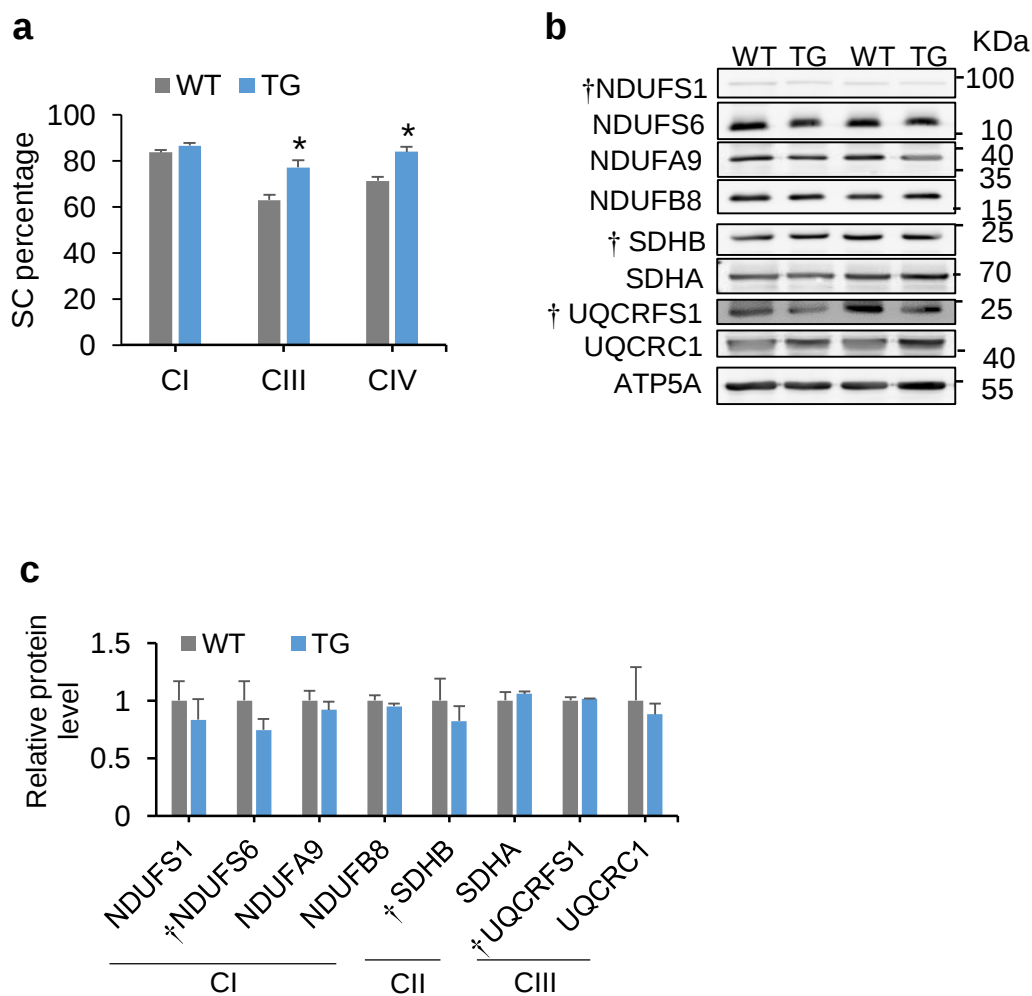

Fig. S15. Changes of supercomplex percentages and individual ETC complex subunits in TG hearts.

(a) The percentages of SCs in TG mitochondria (mean $\pm$ s.e.m.; $n = 4-8$ mice per group, $*p < 0.05$ versus WT).

(b) Western blots for subunits of complexes I-III in *Ndufab1* TG and WT cardiomyocytes. ATP5A served as the loading control. $\dagger$ FeS-containing subunits.

(c) Statistics of **b** (mean $\pm$ s.e.m.; $n = 3$ male mice per group).
