

Fig. S4

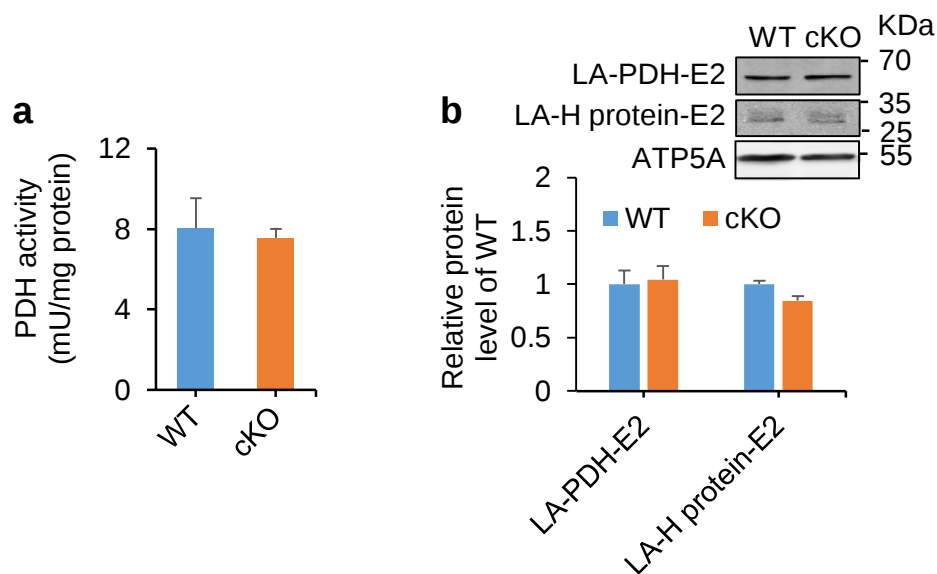

Fig. S4. Little effect of NDUFAB1 ablation on pyruvate dehydrogenase (PDH) activity and protein lipoylation status.

(a) PDH activity in WT and cKO mitochondria (mean $\pm$ s.e.m., $n = 3-4$ mice per group).

(b) Western blots of lipoic acid (LA)-conjugated E2 of PDH complex and H protein. ATP5A served as the loading control. Data are mean $\pm$ s.e.m., $n = 3-6$ mice per group.
