

Fig. S5

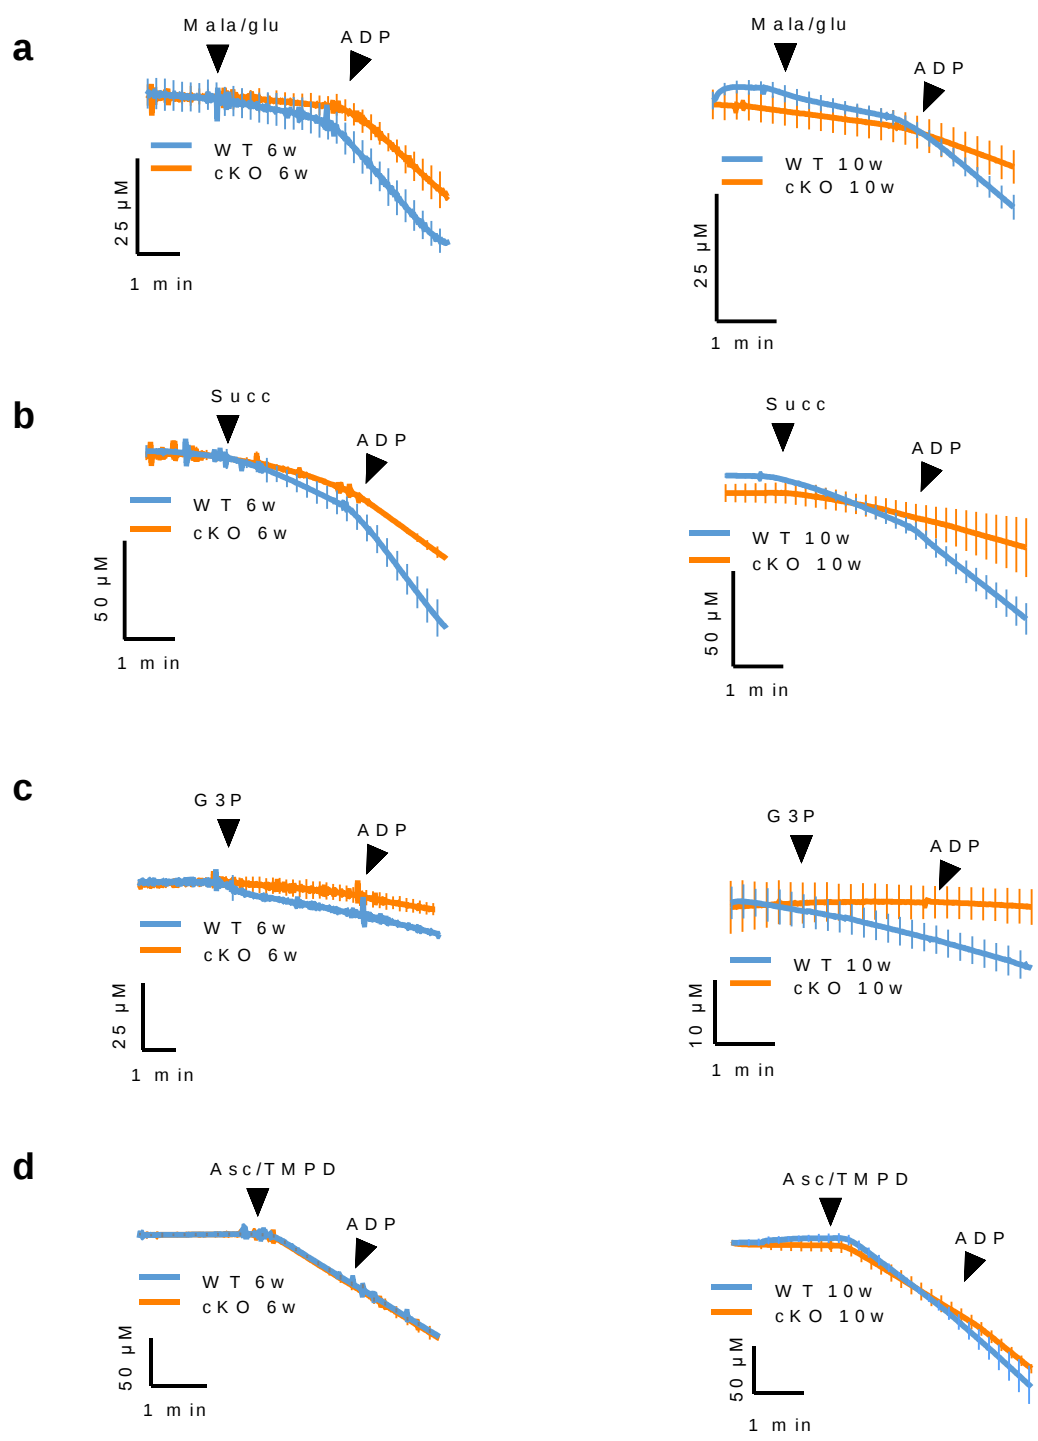

Fig. S5. Average traces of oxygen consumption recorded with Clark electrode in 6-week and 10-week cKO and WT mitochondria in presence of malate/glutamate for complex I (a), succinate for complex II (b), glycerol-3-phosphate for complex III (c) and ascorbate/TMPD for complex IV (d). Data are mean $\pm$ s.e.m.; n = 3–5 male mice per group.
