

Supplementary information, Figure S5

Fig. S5 IHC images of a centimeter-scale tumor sample from hepatocellular carcinoma. 20 consecutive $1\text{ cm} \times 1\text{ cm} \times 5\text{ }\mu\text{m}$ IHC images with the 9th staining failed. Treg: regulatory T cells (Foxp3^+); Tex: exhausted T cell (PD-1^+); CD8: $\text{CD8}^+\text{PD-1}^-$ T cells; cDC1: CLEC9A^+ dendritic cells; M: macrophages (CD68^+); O: other cells. The median distance of the 3rd nearest neighbor of all cells was used as the cutoff to determine whether two cells were spatially connected or not.
