

Supplementary information, Figure S11

Fig. S11 Cell surface expression levels of wild-type CaSR and CaSR mutants. Cell surface expression of receptor mutants were determined by flow cytometry. Cell surface expression of each full-length CaSR mutant was not significantly different from the wild-type receptor. The data represent means $\pm$ SD from 3 independent experiments. Data were analyzed using one-way analysis of variance and Dunnett's post-test in which each mutant was compared to the wild-type receptor (WT CaSR).
