

Supplementary information, Fig. S12. Data collection and image processing of Rpd3S-NCP^{167bp/MLA}. Representative cryo-EM images, 2D classifications and flow-charts of the cryo-EM images processing and 3D reconstruction for Rpd3S-NCP^{167bp/MLA}. Rpd3S and NCP were masked for particle subtraction and local refinement in cryoSPARC. Two focused maps were combined into one map in Chimera X. The overall resolution of the combined maps was estimated in Relion.
