

Supplementary information, Fig. S8 Cavity entrance and lateral access of substrate transport. **a** Electropositive residues along the translocation path of outward-open OATP1B1-*apo* and residues at the extracellular entrance are circled. **b** The surface electrostatic potential shows an electropositive opening formed mainly by EL9-10, EL5-6 and N-termini of TM8 in outward-open structure. **c** Cartoon representation of OATP1B1-*apo*/B/S/D with lipid-like densities shown in mesh.
