

Supplementary information, Fig. S10 Stimulation of hybridoma reconstituted with TCR libraries from the immunized condition.

a-b Representative contour plots showing GFP⁺ cells (**a**) and summary statistics of GFP⁺% (**b**) in hybridoma transduced with indicated TCR libraries after co-culturing with wildtype (blue) or class II MHC-deficient (red) B cells for 24 h. **c-d** Representative contour plots showing GFP⁺ cells (**c**) and summary statistics of GFP⁺% (**d**) in hybridoma transduced with indicated TCR libraries after co-culturing with wildtype (blue) or class II MHC-deficient (red) DCs for 24 h. One of two independent experiments with similar results is shown. Bars are STDs of quadruplicated wells. *P* values by unpaired *t* tests.
