

Fig. S7 The SF3a120 fragments that are anchored on the tri-snRNP in the human ED pre-B and ED B complexes. **a** The EM density map for the region of SF3a120 that interacts with the tri-snRNP core domain in the human late ED pre-B complex. **b** The EM density map for the region of SF3a120 that interacts with the tri-snRNP core domain in the human early ED B complex. **c** Sequence alignment of the newly identified region of SF3a120 from different species.
