

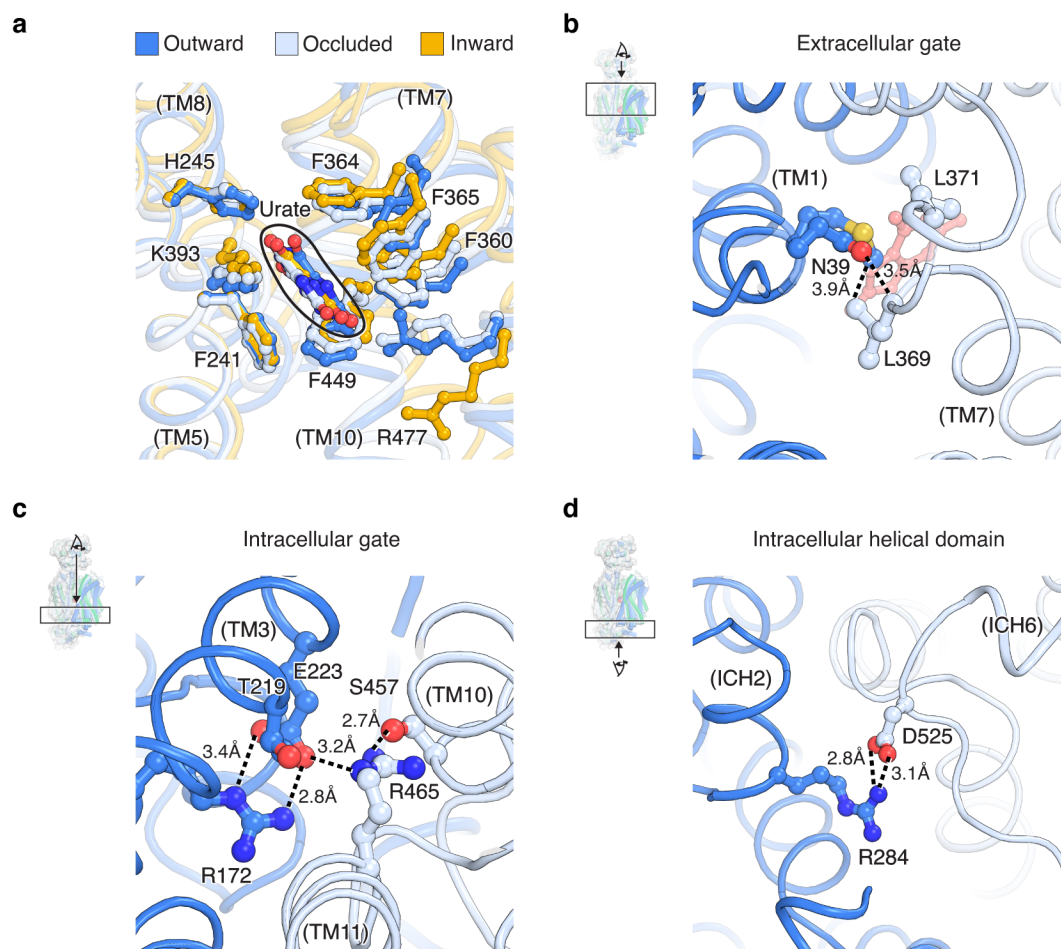

Fig. S9 Structural analyses of the urate pocket and transporter gates

a Superimposition of urate-bound URAT1 in the outward-facing, occluded, and inward-facing conformations, showing the local rearrangements of the urate pocket. **b** Detailed interactions in the extracellular gate. The occluded URAT1 structure is shown. **c** Detailed interactions in the intracellular gate. **d** Detailed interactions in the intracellular helical domain. In **c** and **d** the outward-facing structure is shown.
