

Supplementary Figure 7

Supplementary Figure 7 The LAMP2-V5-RTKs-TKD/ICD are co-localized with LAMP1.

(a) HEK-293T cells stably expressing the indicated plasmids were serum-starved for 24 h, fixed, stained with antibodies against V5 and LAMP1, and then analyzed by immunofluorescence. Scale bar, 5 μ m. Quantification of V5/LAMP1 co-localization was performed on 25 individual cells sampled from 3 independent fields per condition. One-way ANOVA. (b) HEK-293T cells stably expressing the indicated plasmids were serum-starved for 24 h, fixed, stained with antibodies against V5 and LAMP1, and then analyzed by immunofluorescence. Scale bar, 5 μ m. Quantification of V5/LAMP1 co-localization was performed on 25 individual cells sampled from 3 independent fields per condition. Two-tailed unpaired t-test.
