

Supplementary Figure S6 Confidence intervals of the pairwise F_{ST} values from Table 4. **FSTP** = pairwise F_{ST} (Weir and Cockerham, 1984). White data points represent intraspecific pairwise F_{ST} values. Black data points represent supraspecific pairwise F_{ST} values. **A** dataset 1 which comprises 340 individuals representing 17 populations, genotyped for all 63 microsatellite markers where possible, including the assumed monomorphic data (See Supplementary Table S2: categories A, B and C). **B** dataset 2 which comprises 340 individuals representing 17 populations, genotyped for all 63 microsatellite markers where possible, excluding the assumed monomorphic data (See Supplementary Table S2: categories A and B). **C** dataset 3 which comprises 260 individuals representing 13 populations of the 8 taxa of the section *Talauma* subsection *Splendentes* (See Table 1: Class. = TAS), genotyped for 10 microsatellite markers (See Supplementary Table S2: marker names indicated with an asterisk).
