

Description of Additional Supplementary Files

Supplementary Movie 1

Description: *C. difficile* toxins and FlaTox stimulation induce differential cell death morphology in intestinal epithelial cells. Primary intestinal organoids from wildtype mice were stimulated with TcdA, TcdB or FlaTox before PI incorporation was analyzed by time lapse microscopy. The movie shows intervals of 15 minutes per frame during 16 h. Scale bars: 30 μ m. Data are representative of 3 independent experiments.
