

## **Brainstem and spinal cord MRI identifies altered sensorimotor pathways post-stroke**

Karbasforoushan et al.

**Supplementary Figure 1. Stroke lesion overlap map.** Coronal view of the stroke lesion overlap map for the group of 31 individuals with stroke. Majority of stroke participants had lesion in the left hemisphere. For those individuals with lesions in the right hemisphere, lesion maps were flipped so that all subjects had lesions presented in the left hemisphere.  $y$  provides the coronal slice coordinate.  $n$  indicates the number of participants with a lesion in a particular location.
