

Description of Additional Supplementary Files

Supplementary Code: The file 'syntax-for-creating-figures.do' is a syntax file using the software Stata. Stata is statistical software for data analysis and can be purchased at <https://www.stata.com/>. We used version Stata MP 15.1, but the syntax should also work for other versions. The syntax will produce the figures with means/averages presented in the manuscript and supplementary material based on the source data file.
