

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Supplementary data set shows the effect (beta coefficient), p- and q- values of each of the CSF protein abundance that differed between DLB (n=109) and CON (n=190) or AD (n=235) or AD and CON after two-sided nested F-test analysis and FDR post-hoc correction. Significant proteins ($q < 0.05$) are highlighted in bold.
