

Description of Additional Supplementary Files

Supplementary Movie 1: Light-sheet microscopy of the CG/SMG, related to Fig. 1. Whole mount view of the CG/SMG of double heterozygous DBH-CreERT2; Ai9 mice with tamoxifen administration, followed by CUBICbased tissue clearing. Magenta cells represent postGNs labeled with tdT from the Ai9 allele.

Supplementary Movie 2: Light-sheet microscopy of the SC, related to Fig. 1. Whole mount view of the tissue-cleared T5–13 SC of Ai9 mice that received AAVrg hSyn-Cre injection into the CG/SMG, displaying retrogradely labeled tdT+ cells (magenta)
