

Description of Additional Supplementary Files

Supplementary Data 1

Description: Clinical characteristics of the 61 cancer patients used in this study. Subjects from this cohort were symptomatic patients referred for urgent investigation for a possible gynaecological, lower, or upper GI or renal cancer, or to a rapid diagnostic centre (RDC) with non-specific symptoms, which were later diagnosed with cancer, and referred to surgery with curative intent.

Supplementary Data 2

Description: 2113 hyper-methylated regions from 5 TCGA studies (COAD, ESCA, KIRC, KIRP, PAAD). 377 among them were kept in the final analysis, after denoising. Genomic coordinates are 0-based.
