

Supplementary Data Index

Sheet Name: Column Descriptors A

Description: Column descriptors for Supplementary Data 1-12

Sheet Name: Column Descriptors B

Description: Column descriptors for Supplementary Data 13-20

Sheet Name: SupplementaryData1

Description: Independent loci identified through the pixel-level RT GWAS

Sheet Name: SupplementaryData2

Description: Independent loci identified through the FPC RT GWAS

Sheet Name: SupplementaryData3

Description: Mapping of sentinel SNPs and proxies ($r^2 > 0.5$) to genes, based on genomic position.

Sheet Name: SupplementaryData4

Description: Mapping of sentinel SNPs and proxies ($r^2 > 0.5$) to genes, based on co-localisation of eQTLs from retina, blood and brain tissue.

Sheet Name: SupplementaryData5

Description: Mapping of sentinel SNPs and proxies ($r^2 > 0.5$) to genes, based on chromatin interaction data from adult and fetal cortex, and retina

Sheet Name: SupplementaryData6

Description: Summary of all genes mapped from GWAS loci, based on positional, eQTL, or chromatin Interaction mapping.

Sheet Name: SupplementaryData7

Description: Look up of loci identified in the pixel-level analyses in previous GWAS of retinal thickness traits

Sheet Name: SupplementaryData8

Description: Look up of loci identified in the FPC analyses in previous GWAS of retinal thickness traits

Sheet Name: SupplementaryData9

Description: Comparison of effects in European, Central and South Asian and African ancestries, for all sentinel SNPs identified through the pixel-level, or FPC GWAS.

Sheet Name: SupplementaryData10

Description: PheWAS results for all identified SNPs.

Sheet Name: SupplementaryData11

Description: Results of genetic correlation analysis using LD-score regression

Sheet Name: SupplementaryData12

Description: Gene Ontology Over-representation analyses, for genes identified through the fPC and pixel-level GWAS

Sheet Name: SupplementaryData13

Description: Metabolite information and their average association statistics with retinal thickness

Sheet Name: SupplementaryData14

Description: Metabolite information and their average interaction effect with age on retinal thickness.

Sheet Name: SupplementaryData15

Description: Metabolic genetic score information and their average association statistics with retinal thickness

Sheet Name: SupplementaryData16

Description: PheCode information and their average association statistics with retinal thickness

Sheet Name: SupplementaryData17

Description: List of trait genetic scores, their information and their average association statistics with retinal thickness.

Sheet Name: SupplementaryData18

Description: Analysis of correlation across pixels between disease Phecodes and respective genetic scores

Sheet Name: SupplementaryData19

Description: Blood and inflammation marker information and their average association statistics with retinal thickness

Sheet Name: SupplementaryData20

Description: Antigen markers of infection information and their average association statistics with retinal thickness
