

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Genera with significant changes in rhizosphere soil from vegetable plants leaf-exposed by various organic pollutants, compared to the control group.

File Name: Supplementary Data 2

Description: Metabolites with significant changes in root exudates of vegetable plants for foliar exposure of various organic pollutants, compared to the control group.

File Name: Supplementary Data 3

Description: Bacterial preference of strains LSS1 and LSS2 on root exudate metabolites with significant change.

File Name: Supplementary Data 4

Description: Change of root exudate metabolites when H₂O₂ and linoleic acid existing.
