

1 **Structural insights into VLDLR recognition by**

2 **Western Equine Encephalitis Virus**

3 Shengjian Liang, et. al.

4 **Supplementary information:**

5 **Supplementary Figures 1-11**

6 **Supplementary Tables 1-2**

8 **Supplementary Figure 1**

9

10 **Supplementary Figure 1. Cryo-EM reconstruction workflow of WEEV VLPs in complex**
11 **with VLDLR-LA1-3.**

12

13 **Supplementary Figure 2**

14

15 **Supplementary Figure 2. Cryo-EM quality estimate, related to Figures 1 and 3.** The local
16 resolutions (left) were estimated in cryoSPARC and are indicated by the bars and Fourier shell
17 correlation (FSC) (middle) of the 3D reconstructions for VLPs or the q3 spike following gold
18 standard refinement. FSC curves are plotted after masking. Angular distribution calculated in
19 cryoSPARC (right).

29 **Supplementary Figure 4**

30
31 **Supplementary Figure 4. ELISA analysis of different LA repeats.** Binding of different LA
32 repeats-Fc fusions to WEEV VLPs measured by enzyme-linked immunosorbent assay (ELISA).
33 The equilibrium dissociation constant (K_D) was calculated as mean of two biologically
34 independent experiments.

43 **Supplementary Figure 5**

44

45 **Supplementary Figure 5. Cell-based assays for the impacts of VLDLR single LA repeat**
46 **and mutants on WEEV infection. (a)** Schematic diagram of a single LA repeat. **(b)** K562 cells
47 stably expressing indicated VLDLR proteins were infected with VSV-WEEV (California) (MOI =
48 0.2) for 24 h. Infection was monitored by flow cytometry . Expression of the indicated proteins
49 was confirmed by immunoblots. Data are mean $\pm$ SD from 3 biological repeats (n=3) and p
50 values are from unpaired two-tailed Student's t-test. At least three independent experiments
51 were performed with similar results and representative images are shown. All t-test data for the
52 experimental groups were calculated relative to the Vec as the control. Source data are
53 available as a Source Data file.

54

55 **Supplementary Figure 6**

56
57 **Supplementary Figure 6. The effect of calcium ions on the binding of WEEV VLPs to**
58 **VLDLR-LA1-3. (a)** The structure of VLDLR-LA1-3 is fitted into the cryo-EM density of the
59 WEEV California VLP-VLDLR-LA1-3 complex. The density corresponding to two calcium ions
60 is colored green. The density corresponding to LA1 and LA2 is colored red. **(b)** The binding
61 and dissociation curves of WT VLDLR-LA1-3 with WEEV California VLPs with 0, 10 mM EGTA
62 are shown.

63

64 **Supplementary Figure 7**

65
66 **Supplementary Figure 7. Sequence alignment of eight LA repeats.** The sequences' eight
67 LA repeats were aligned in Clustal Omega and were colored using ESPrpt 3.0. The key
68 interacting residues in LA1 and LA2 are indicated with red stars and blue stars, respectively.

73 **Supplementary Figure 8**

74

75 **Supplementary Figure 8. BLI analysis of VLDLR LA3 and LA5 with WEEV California E1-**
76 **DIII** Biolayer interferometry binding analysis of VLDLR LA3 (left panel) and LA5 (right panel) to
77 WEEV California E1-DIII. The displayed results were obtained from a single technical replicate
78 and are representative of three biologically independent experiments. The equilibrium
79 dissociation constant (K_D) was calculated as the mean $\pm$ standard deviation (SD; $n = 3$).

Supplementary Figure 9. Sequence alignment of E1 proteins of the WEEV strains. The WEEV strains for comparison include CBA87 in group C; California (1930), Fleming (1938), McMillan (1941), Y62-33 and CU71-CPA in group A; BFS2005 (1954) and BFS932 (1946) in group B1; Montana-64 (1967) and 71V1658 (1971) in group B2; 85-452NM (1985) and PV012357A (2001), as well as R02V003422B (2005) and Imperial 181 (2005), in group B3. Sequences were aligned by Clustal Omega and were colored using ESPript 3.0. Red boxes indicate residues that are strictly conserved; white boxes and red letters indicate conserved residues within the specific group; white boxes and black letters indicate non-conserved residues. Domains of E1 protein are indicated by colored bars above the sequence alignment: A (white), B (light gray), C (medium gray), ectodomain and TM (deep gray), and fusion loop (orange). Interacting residues with VLDLR and PCDH10 (distance less than 4.0 Å) are indicated by red and blue stars.

Supplementary Figure 10. Sequence alignment of E2 proteins of the WEEV strains. The sequences of E2 proteins encoded by various WEEV strains were aligned and shown. Domains of E2 protein are indicated by colored bars above the sequence alignment: A (pale cyan), beta (light teal), B (deep teal), C (sky blue), and TM (deep blue). Interacting residues with VLDLR and PCDH10 (distance less than 4.0 Å) are indicated by red and blue stars.

119
 120 **Supplementary Figure 11.** Comparative receptor recognition by WEEV, EEEV, and SFV. **(a)**
 121 Comparison of WEEV binding to VLDLR and PCDH10 (PDB: 9L41). The E1E2 proteins of
 122 WEEV were aligned using Coot to illustrate the binding modes. **(b-d)** Depiction of the
 123 interactions of VLDLR with WEEV California, EEEV (PDB: 8XI4), WEEV Fleming (PDB: 9E9Z),

124 and SFV (PDB: 8IHP). The E1E2 proteins of WEEV California and EEEV (PDB: 8XI4) were
125 aligned in Coot to highlight the differences in VLDLR recognition (b). The E1E2 proteins of
126 WEEV California, WEEV Fleming (PDB: 9E9Z), and EEEV (PDB: 8XI4) were aligned in Coot to
127 highlight the differences in VLDLR recognition (c). (d) The top view of figure (c), The PDB
128 structure of SFV:VLDLR-LA3 (PDB: 8IHP) was fitted into the cryo-EM density map of
129 WEEV:VLDLR-LA3 (c) and WEEV:VLDLR-LA5 (d).
