**NRF2 mediates melanoma addiction to
GCDH by modulating apoptotic signalling**

In the format provided by the
authors and unedited

Supplementary Figure 1. Gating strategy for Extended data figure 3F. Analysis to determine apoptotic population was performed by FlowJo 10.8.0's implantation of the Watson pragmatic model. First, scatter gate were placed to remove debris then aggregates removed by gating in PI-H vs PI-A plot. The Watson Pragmatic Model to determine cell cycle phases including sub-G0, with Constrained: G2 peak CV = G1 peak CV.
