Supplementary Figure 1_Gating Strategy for FACs Sorting in Extended Data Fig. 7g

An example of gating strategy for FACs sorting used in Extended Data Fig. 7g. STAT::GFP+ or STAT::GFP- glia were sorted sequentially by the following gates: a. forward versus side scatter (FSC vs SSC); b. forward scatter height versus width (FSC-H vs FSC-W); c. side scatter height versus width (SSC-H vs SSC-W); d. Calcein pacific blue (labelling live cells) versus Sytox APC (labelling dead cells); e. GFP versus YG-mCherry fluorescence channel.
