
Supplementary information

Chemical reprogramming of human somatic cells to pluripotent stem cells

In the format provided by the
authors and unedited

Supplementary Fig. 1

Supplementary Fig. 1 | Flow cytometry gating strategy. Singlets were gated (P1) from all captured events by forward scatter (FSC) and side scatter (SSC). P1 events were then gated based on clustering of subpopulations and their marker expression levels. All flow cytometry results were shown as pseudocolor plots.
