

Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our [Editorial Policies](#) and the [Editorial Policy Checklist](#).

Statistics

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

- | | |
|-------------------------------------|--|
| n/a | Confirmed |
| ☐ | ☒ The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement |
| ☐ | ☒ A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly |
| ☒ | ☐ The statistical test(s) used AND whether they are one- or two-sided
<i>Only common tests should be described solely by name; describe more complex techniques in the Methods section.</i> |
| ☒ | ☐ A description of all covariates tested |
| ☒ | ☐ A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons |
| ☐ | ☒ A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals) |
| ☒ | ☐ For null hypothesis testing, the test statistic (e.g. F , t , r) with confidence intervals, effect sizes, degrees of freedom and P value noted
<i>Give P values as exact values whenever suitable.</i> |
| ☒ | ☐ For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings |
| ☒ | ☐ For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes |
| ☒ | ☐ Estimates of effect sizes (e.g. Cohen's d , Pearson's r), indicating how they were calculated |

Our web collection on [statistics for biologists](#) contains articles on many of the points above.

Software and code

Policy information about [availability of computer code](#)

Data collection Crystallography: XDS (v. 2020), SAXS: SASFLOW (v. 3.0).

Data analysis phenix (1.19.1-4122-000), Coot (0.9), alphafold2(<https://github.com/deepmind/alphafold>; v 2.0.0), Colabfold (v.1.0-1.4), PyMOL (v 2.0), ASTRA 8 (Wyatt), ATSAS package (v. 3.1.3, contains all SAXS analysis software that was used in this study), Molprobit (<http://molprobit.biochem.duke.edu/> v. 4.5.1), webflags server (<http://www.webflags.se/> v. 2020), Biacore Insight Evaluation (v. 3.0.12.15655), DeerAnalysis 2022 including ComparativeDeerAnalyzer (v. 2.0), mtsslWizard (Webserver version, <http://www.mtssluite.isb.ukbonn.de/>)

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio [guidelines for submitting code & software](#) for further information.

Data

Policy information about [availability of data](#)

All manuscripts must include a [data availability statement](#). This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our [policy](#)

The crystal structures have been deposited in the PDB with the accession codes 7QDA [<https://doi.org/10.2210/pdb7QDA/pdb>], 8B0R [<https://doi.org/10.2210/pdb8B0R/pdb>], 8B0U [<https://doi.org/10.2210/pdb8B0U/pdb>]. The SAXS data and models have been deposited in the SASBDB with the accession codes: SASDQM4 [<https://www.sasbdb.org/data/SASDQM4>], SASDQN4 [<https://www.sasbdb.org/data/SASDQN4>], SASDQP4 [<https://www.sasbdb.org/data/SASDQP4>], SASDQQ4 [<https://www.sasbdb.org/data/SASDQQ4>]. The following PDB entries have been used in this study: 2H27 [<https://doi.org/10.2210/pdb2H27/pdb>], 3K1J [<https://doi.org/10.2210/pdb3K1J/pdb>].

doi.org/10.2210/pdb3K1J/pdb], 4ME7 [https://doi.org/10.2210/pdb4ME7/pdb], 4IZJ [https://doi.org/10.2210/pdb4IZJ/pdb], 4LUP [https://doi.org/10.2210/pdb4LUP/pdb], 5ZX2 [https://doi.org/10.2210/pdb5ZX2/pdb], 5CR2 [https://doi.org/10.2210/pdb5CR2/pdb], 6VM6 [https://doi.org/10.2210/pdb6VM6/pdb], 6SCE [https://doi.org/10.2210/pdb6SCE/pdb], 7RWK [https://doi.org/10.2210/pdb7RWK/pdb]

Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

☒ Life sciences ☐ Behavioural & social sciences ☐ Ecological, evolutionary & environmental sciences

For a reference copy of the document with all sections, see [nature.com/documents/nr-reporting-summary-flat.pdf](https://www.nature.com/documents/nr-reporting-summary-flat.pdf)

Life sciences study design

All studies must disclose on these points even when the disclosure is negative.

Sample size	No sample size calculation was performed, because not needed for this biochemical data.
Data exclusions	No data were excluded from the analyses.
Replication	The key findings such as the protease activation by cA4 were repeated multiple times in different laboratories (Gregor Hagelueken and Malcolm F. White). The formation of the protein complexes was also independently shown in both laboratories. All attempts at replication were successful. The number and type of replications (biological or technical) are given for each experiment in the particular figure legend. No replication attempts were unsuccessful.
Randomization	Randomization was not relevant to this study.
Blinding	Blinding was not relevant to this study.

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experimental systems

n/a	Involved in the study
☒	☐ Antibodies
☒	☐ Eukaryotic cell lines
☒	☐ Palaeontology and archaeology
☒	☐ Animals and other organisms
☒	☐ Human research participants
☒	☐ Clinical data
☒	☐ Dual use research of concern

Methods

n/a	Involved in the study
☒	☐ ChIP-seq
☒	☐ Flow cytometry
☒	☐ MRI-based neuroimaging
