
Supplementary information

A human-specific enhancer fine-tunes radial glia potency and corticogenesis

In the format provided by the
authors and unedited

Supplementary Fig. 1: 1.5% agarose gel electrophoresis for cropped gel in Extended Data Fig. 11b. This shows EcoRI enzyme digestion of PCR amplified products using genotyping PCR primer sets (listed in Supplementary table 3). Samples are from individual CRISPR-edited colony, with 1 kb Plus DNA Ladder on right. The size of the DNA band from top to bottom include: 989bp; 360bp; 180/182bp.
