

Supplementary Figure 2 | Representative raw flow-cytometry plots for PI fluorescence analysis in yeast cells under control and heat-stress conditions. Representative FSC-A/SSC-A plots and PI fluorescence (FL2-A) histograms of BY4741, *dnf1Δ*, *dnf2Δ*, and *dnf1Δdnf2Δ* cells under control conditions (28°C; **a**) and after heat treatment (55°C, 1 h; **b**). No additional post-acquisition gating was applied. These plots correspond to the quantification shown in **Fig. 4j**.
