Supplementary Figure 1

Dissected sheet of human urothelial tissue under a microscope.

A, B and C are the same dissected sheet of urothelial tissue from a human bladder at different magnifications. The basal cells are shown facing up. The underlining intermediate cells and umbrella cells could not be seen without removal of the basal cells. Scale bars in: A = 400 μm ; B = 200 μm ; C = 100 μm . (Human bladder obtained from cystectomy specimens approved by the Yale human research IRB.)
