Excerpt from the Minutes of the Meeting of the Biomedical Ethics Committee
Tyumen Cardiology Research Center – a Branch of the Tomsk National Research Medical Center
Protocol No. 194, dated February 13, 2024

The Biomedical Ethics Committee of the Tyumen Cardiology Research Center, a Federal State Budgetary Scientific Institution "Tomsk National Research Medical Center of the Russian Academy of Sciences," operates in accordance with ICH GCP standards.

Local Ethics Committee Conclusion

The Committee has reviewed the study materials submitted by the authors of the article *"CoronaryDominance: Angiogram dataset for coronary dominance classification,"* including anonymized patient angiographic data.

1. All data intended for open publication are fully de-identified (anonymized) and do not allow for the direct or indirect identification of patients.
2. The initial informed consent provided by patients for participation in the study and for the use of their personal data for scientific purposes includes the possibility of publishing the data in anonymized form, provided that there is no risk of breaching participants' confidentiality.
3. The publication of anonymized data does not violate any rights and poses no risks to the health, privacy, or well-being of the individuals involved.
4. This decision fulfills three conditions:
   a) The study would not be feasible or practicable without the modification or waiver of informed consent.
   b) It has important social value.
   c) It poses no more than minimal risk to participants.

Based on the materials presented and in accordance with current ethical standards and regulations, the Local Ethics Committee grants official permission for the use and publication of the aforementioned anonymized data without obtaining additional informed consent.

Chair of the Local Ethics Committee
V. Todosiychuk, MD, PhD

Secretary of the Local Ethics Committee
R. Kurnosenko
