

Title:

Fibrosis quantification in Hypertensive Heart Disease with LVH and Non-LVH: Findings from T1 mapping and Contrast-free Cardiac Diffusion weighted imaging.

Authors:

Supplementary Figure

Supplementary Figure Legends

Supplementary Figure

. (g-h) Typical example of a 56-year-old male patient admitted with HTN LVH. Raw diffusion weighted images $b=0$ s/mm² (g), $b=350$ s/mm² (h). (i-j) Typical example of a 55-year-old male patient admitted with HTN non-LVH. Raw diffusion weighted images $b=0$ s/mm² (i), $b=350$ s/mm² (j). (k-l) Typical example of a 36-year-old normal control. Raw diffusion weighted images $b=0$ s/mm² (k), $b=350$ s/mm² (l).
