Procrustes sums of squares: 0.5088436638647192

Tangent sums of squares: 0.499623790655455

Data matrices in this dataset:

- RawData_Canals, raw data
- RawData_Canals, centroid size
- RawData_Canals, Procrustes coordinates

Canonical Variate Analysis: CVA ...RawData_Canals

Dataset: RawData_Canals

Classification criterion: environment

Groups Observations

- | | | |
|----|-------------|----|
| 1. | | 4 |
| 2. | coastal | 13 |
| 3. | continental | 8 |
| 4. | marine | 5 |
| 5. | polar | 2 |

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.98664590	46.731	46.731
2.	2.01984474	31.604	78.334
3.	0.87236469	13.650	91.984
4.	0.51232116	8.016	100.000

Mahalanobis distances among groups:

	coastal	continental	marine
coastal	2.9312		
continental	3.1480	3.8272	
marine	3.0002	3.3716	4.2839

polar	4.7609	4.9986	5.9580	4.2758
-------	--------	--------	--------	--------

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine	
coastal	0.7904			
continental	0.5835	0.0001		
marine	0.9690	0.0042	0.0007	
polar	0.3924	0.0093	0.0215	0.6106

Procrustes distances among groups:

	coastal	continental	marine	
coastal	0.0558			
continental	0.0885	0.0813		
marine	0.0716	0.0685	0.1069	
polar	0.1232	0.1134	0.1557	0.1093

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine	
coastal	0.9279			
continental	0.0489	0.0196		
marine	0.5308	0.4139	0.0081	
polar	0.2434	0.2292	0.0393	0.4038

Total variance: 0.01611690

Variance of the eigenvalues: 0.0000000341113

Eigenvalue variance scaled by total variance: 0.00013

Eigenvalue variance scaled by total variance and number of variables: 0.10007

Note: throughout all calculations of eigenvalue variances, the dimensionality used was 761.

Please double-check because this dimensionality may not be appropriate for all situations.

Warning: There appear to be fewer PCs than dimensions in shape space. This can have the following reasons, among others:

-- the degrees of freedom are less than the shape dimensionality (sample size, etc.).

-- there is complete integration in the data.

Interpret the results cautiously and check for reasons why this is the case.

Classification criterion: environment

Groups Observations

1. 4
2. coastal 13
3. continental 8
4. marine 5
5. polar 2

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.98664590	46.731	46.731
2.	2.01984474	31.604	78.334
3.	0.87236469	13.650	91.984

4. 0.51232116 8.016 100.000

Mahalanobis distances among groups:

	coastal	continental	marine	
coastal	2.9312			
continental	3.1480	3.8272		
marine	3.0002	3.3716	4.2839	
polar	4.7609	4.9986	5.9580	4.2758

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine	
coastal	0.7883			
continental	0.5862	<.0001		
marine	0.9679	0.0047	0.0009	
polar	0.3958	0.0084	0.0224	0.6164

Procrustes distances among groups:

	coastal	continental	marine	
coastal	0.0558			
continental	0.0885	0.0813		
marine	0.0716	0.0685	0.1069	
polar	0.1232	0.1134	0.1557	0.1093

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine	
coastal	0.9247			
continental	0.0483	0.0188		
marine	0.5258	0.4079	0.0095	
polar	0.2284	0.2295	0.0424	0.4076

New Procrustes fit:

Dataset 'RawData_Canals'

256 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.5088436638647192

Tangent sums of squares: 0.499623790655455

Data matrices in this dataset:

- RawData_Canals, raw data
- RawData_Canals, centroid size
- RawData_Canals, Procrustes coordinates

New Procrustes fit:

Dataset 'RawData_Canals'

256 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.5088436638647192

Tangent sums of squares: 0.499623790655455

Data matrices in this dataset:

- RawData_Canals, raw data
- RawData_Canals, centroid size
- RawData_Canals, Procrustes coordinates

Principal Component Analysis: PCA: CovMatrix, RawData_Canals, Procrustes coordinates

Total variance: 0.01611690

Variance of the eigenvalues: 0.0000000341113

Eigenvalue variance scaled by total variance: 0.00013

Eigenvalue variance scaled by total variance and number of variables: 0.10007

Note: throughout all calculations of eigenvalue variances, the dimensionality used was 761.

Please double-check because this dimensionality may not be appropriate for all situations.

Warning: There appear to be fewer PCs than dimensions in shape space. This can have the following reasons, among others:

-- the degrees of freedom are less than the shape dimensionality (sample size, etc.).

-- there is complete integration in the data.

Interpret the results cautiously and check for reasons why this is the case.

Canonical Variate Analysis: CVA ...RawData_Canals

Dataset: RawData_Canals

Classification criterion: environment

Groups Observations

1. coastal 15
2. continental 8
3. marine 7
4. polar 2

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.78905346	54.894	54.894
2.	1.59663810	31.425	86.319
3.	0.69511754	13.681	100.000

Mahalanobis distances among groups:

	coastal	continental	marine
continental	3.4598		
marine	2.6000	3.8902	
polar	4.9570	6.0398	4.1222

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine
continental	<.0001		
marine	0.0474	0.0008	
polar	0.0131	0.0198	0.6599

Procrustes distances among groups:

	coastal	continental	marine
continental	0.0776		
marine	0.0605	0.1039	
polar	0.1155	0.1557	0.1065

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine
continental	0.0179		
marine	0.2974	0.0032	
polar	0.1629	0.0406	0.3112

Total variance: 0.01611690

Variance of the eigenvalues: 0.0000000341113

Eigenvalue variance scaled by total variance: 0.00013

Eigenvalue variance scaled by total variance and number of variables: 0.10007

Note: throughout all calculations of eigenvalue variances, the dimensionality used was 761.

Please double-check because this dimensionality may not be appropriate for all situations.

Warning: There appear to be fewer PCs than dimensions in shape space. This can have the following reasons, among others:

- the degrees of freedom are less than the shape dimensionality (sample size, etc.).
- there is complete integration in the data.

Interpret the results cautiously and check for reasons why this is the case.

Canonical Variate Analysis: CVA ...RawData_Canals

Dataset: RawData_Canals

Classification criterion: environment

Groups Observations

1. coastal 15
2. continental 8
3. marine 7
4. polar 2

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.78905346	54.894	54.894
2.	1.59663810	31.425	86.319
3.	0.69511754	13.681	100.000

Mahalanobis distances among groups:

	coastal	continental	marine
continental	3.4598		
marine	2.6000	3.8902	
polar	4.9570	6.0398	4.1222

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine
continental	<.0001		
marine	0.0536	0.0004	
polar	0.0122	0.0212	0.6685

Procrustes distances among groups:

	coastal	continental	marine
continental	0.0776		
marine	0.0605	0.1039	
polar	0.1155	0.1557	0.1065

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine
continental	0.0178		
marine	0.2962	0.0034	
polar	0.1612	0.0439	0.3051

Phylogenetic mapping

Dataset: PC scores, CovMatrix, RawData_Canals, Procrustes coordinates

Data type: PC scores

Phylogeny: Phylogeny_RawData_Canals

Method: weighted squared-change parsimony

The tree is rooted.

Tree length: 0.18297160

Permutation test against the null hypothesis of no phylogenetic signal

Number of randomization rounds: 10000

P-value: 0.3172

New Procrustes fit:

Dataset 'RawData_Cochlea'

451 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.5450287978409385

Tangent sums of squares: 0.5343685624862355

Data matrices in this dataset:

- RawData_Cochlea, raw data
- RawData_Cochlea, centroid size
- RawData_Cochlea, Procrustes coordinates

New Procrustes fit:

Dataset 'RawData_Cochlea'

451 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.5450287978409385

Tangent sums of squares: 0.5343685624862355

Data matrices in this dataset:

- RawData_Cochlea, raw data
- RawData_Cochlea, centroid size
- RawData_Cochlea, Procrustes coordinates

Principal Component Analysis: PCA: CovMatrix, RawData_Cochlea, Procrustes coordinates

Total variance: 0.01723770

Variance of the eigenvalues: 0.0000000190615

Eigenvalue variance scaled by total variance: 0.00006

Eigenvalue variance scaled by total variance and number of variables: 0.08641

Note: throughout all calculations of eigenvalue variances, the dimensionality used was 1346.

Please double-check because this dimensionality may not be appropriate for all situations.

Warning: There appear to be fewer PCs than dimensions in shape space. This can have the following reasons, among others:

-- the degrees of freedom are less than the shape dimensionality (sample size, etc.).

-- there is complete integration in the data.

Interpret the results cautiously and check for reasons why this is the case.

Phylogenetic mapping

Dataset: PC scores, CovMatrix, RawData_Cochlea, Procrustes coordinates

Data type: PC scores

Phylogeny: Phylogeny_RawData_Cochlea

Method: weighted squared-change parsimony

The tree is rooted.

Tree length: 0.17879403

Permutation test against the null hypothesis of no phylogenetic signal

Number of randomization rounds: 10000

P-value: 0.0001

Canonical Variate Analysis: CVA ...RawData_Cochlea

Dataset: RawData_Cochlea

Classification criterion: environment

Groups Observations

- | | | |
|----|-------------|----|
| 1. | coastal | 15 |
| 2. | continental | 8 |
| 3. | marine | 7 |
| 4. | polar | 2 |

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.22758787	51.966	51.966
2.	1.43064974	33.375	85.341
3.	0.62836562	14.659	100.000

Mahalanobis distances among groups:

	coastal	continental	marine
continental	3.1004		
marine	2.9290	4.0431	
polar	3.8287	3.8110	3.7697

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine
continental	0.0001		
marine	0.0038	0.0007	
polar	0.8362	0.9276	1.0000

Procrustes distances among groups:

	coastal	continental	marine
continental	0.0804		
marine	0.0837	0.1172	
polar	0.0997	0.0914	0.1228

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine
continental	0.0106		
marine	0.0230	0.0003	
polar	0.3767	0.3501	0.1122
