Phylogenetic mapping

Dataset: PC scores, CovMatrix, PD_All, Procrustes coordinates

Data type: PC scores

Phylogeny: Phylogeny_PD_All

Method: weighted squared-change parsimony

The tree is rooted.

Tree length: 0.07547497

Permutation test against the null hypothesis of no phylogenetic signal

Number of randomization rounds: 10000

P-value: <.0001

Canonical Variate Analysis: CVA ...PD_All

Dataset: PD_All

Classification criterion: environment

Groups Observations

1. coastal 15
2. continental 8
3. marine 7
4. polar 2

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.57598524	59.104	59.104
2.	1.10231149	25.292	84.395

3. 0.68010747 15.605 100.000

Mahalanobis distances among groups:

	coastal	continental	marine
continental	2.7784		
marine	2.7181	3.8810	
polar	4.4633	4.1155	5.9216

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine
continental	0.0038		
marine	0.0133	0.0016	
polar	0.0236	0.5789	0.0278

Procrustes distances among groups:

	coastal	continental	marine
continental	0.0529		
marine	0.0530	0.0813	
polar	0.0924	0.0764	0.1126

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine
continental	0.0213		

marine	0.0507	0.0004	
polar	0.0310	0.0810	0.0271

New Procrustes fit:

Dataset 'PD_Canals'

256 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.24443931539172967

Tangent sums of squares: 0.2421380384414816

Data matrices in this dataset:

- PD_Canals, raw data
- PD_Canals, centroid size
- PD_Canals, Procrustes coordinates

New Procrustes fit:

Dataset 'PD_Canals'

256 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.24443931539172967

Tangent sums of squares: 0.2421380384414816

Data matrices in this dataset:

- PD_Canals, raw data
- PD_Canals, centroid size
- PD_Canals, Procrustes coordinates

Principal Component Analysis: PCA: CovMatrix, PD_Canals, Procrustes coordinates

31.	0.00001818	0.233	100.000

Total variance: 0.00781090

Variance of the eigenvalues: 0.0000000073130

Eigenvalue variance scaled by total variance: 0.00012

Eigenvalue variance scaled by total variance and number of variables: 0.09134

Note: throughout all calculations of eigenvalue variances, the dimensionality used was 761.

Please double-check because this dimensionality may not be appropriate for all situations.

Warning: There appear to be fewer PCs than dimensions in shape space. This can have the following reasons, among others:

- the degrees of freedom are less than the shape dimensionality (sample size, etc.).
- there is complete integration in the data.

Interpret the results cautiously and check for reasons why this is the case.

Phylogenetic mapping

Dataset: PC scores, CovMatrix, PD_Canals, Procrustes coordinates

Data type: PC scores

Phylogeny: Phylogeny_PD_Canals

Method: weighted squared-change parsimony

The tree is rooted.

Tree length: 0.08933388

Permutation test against the null hypothesis of no phylogenetic signal

Number of randomization rounds: 10000

P-value: 0.1460

Canonical Variate Analysis: CVA ...PD_Canals

Dataset: PD_Canals

Classification criterion: environment

Groups Observations

1. coastal 15
2. continental 8
3. marine 7
4. polar 2

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.00826303	54.190	54.190
2.	1.05023894	28.339	82.529
3.	0.64745605	17.471	100.000

Mahalanobis distances among groups:

	coastal	continental	marine
continental	2.6261		
marine	2.0170	3.1568	
polar	4.7946	5.7015	4.6134

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine
continental	0.0118		
marine	0.9982	0.0119	
polar	0.0094	0.0124	0.1927

Procrustes distances among groups:

	coastal	continental	marine
continental	0.0411		
marine	0.0470	0.0585	
polar	0.0904	0.1037	0.0885

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine
continental	0.2501		
marine	0.1327	0.0032	
polar	0.1429	0.0361	0.1667

New Procrustes fit:

Dataset 'PD_Cochlea'

451 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.2937948120094654

Tangent sums of squares: 0.2906226700607716

Data matrices in this dataset:

- PD_Cochlea, raw data
- PD_Cochlea, centroid size
- PD_Cochlea, Procrustes coordinates

New Procrustes fit:

Dataset 'PD_Cochlea'

451 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.2937948120094654

Tangent sums of squares: 0.2906226700607716

Data matrices in this dataset:

- PD_Cochlea, raw data
- PD_Cochlea, centroid size
- PD_Cochlea, Procrustes coordinates

Principal Component Analysis: PCA: CovMatrix, PD_Cochlea, Procrustes coordinates

Total variance: 0.00937492

Variance of the eigenvalues: 0.0000000058769

Eigenvalue variance scaled by total variance: 0.00007

Eigenvalue variance scaled by total variance and number of variables: 0.09007

Note: throughout all calculations of eigenvalue variances, the dimensionality used was 1346.

Please double-check because this dimensionality may not be appropriate for all situations.

Warning: There appear to be fewer PCs than dimensions in shape space. This can have the following reasons, among others:

-- the degrees of freedom are less than the shape dimensionality (sample size, etc.).

-- there is complete integration in the data.

Interpret the results cautiously and check for reasons why this is the case.

Phylogenetic mapping

Dataset: PD_Cochlea

Data type: Procrustes coordinates

Phylogeny: Phylogeny_PD_Cochlea

Method: weighted squared-change parsimony

The tree is rooted.

Tree length: 0.09608917

Permutation test against the null hypothesis of no phylogenetic signal

Number of randomization rounds: 10000

P-value: 0.0001

Phylogenetic mapping

Dataset: PC scores, CovMatrix, PD_Cochlea, Procrustes coordinates

Data type: PC scores

Phylogeny: Phylogeny_PD_Cochlea

Method: weighted squared-change parsimony

The tree is rooted.

Tree length: 0.09608917

Permutation test against the null hypothesis of no phylogenetic signal

Number of randomization rounds: 10000

P-value: 0.0005

Canonical Variate Analysis: CVA ...PD_Cochlea

Dataset: PD_Cochlea

Classification criterion: environment

Groups Observations

1. coastal 15
2. continental 8
3. marine 7
4. polar 2

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	1.68839868	46.941	46.941
2.	1.45253938	40.384	87.325
3.	0.45591702	12.675	100.000

Mahalanobis distances among groups:

	coastal	continental	marine
continental	2.8959		
marine	3.0476	3.2633	
polar	2.8416	3.3119	4.0279

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine
continental	0.0015		

marine	0.0012	0.0126	
polar	0.9919	1.0000	0.7485

Procrustes distances among groups:

	coastal	continental	marine
continental	0.0532		
marine	0.0677	0.0862	
polar	0.0726	0.0747	0.0961

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine
continental	0.0398		
marine	0.0067	0.0015	
polar	0.3695	0.2170	0.1385

Procrustes sums of squares: 0.4196212041790885

Tangent sums of squares: 0.41331392217854157

Data matrices in this dataset:

- RawData_All, raw data
- RawData_All, centroid size
- RawData_All, Procrustes coordinates

New Procrustes fit:

Dataset 'RawData_All'

717 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.4196212041790885

Tangent sums of squares: 0.41331392217854157

Data matrices in this dataset:

- RawData_All, raw data
- RawData_All, centroid size
- RawData_All, Procrustes coordinates

Principal Component Analysis: PCA: CovMatrix, RawData_All, Procrustes coordinates

Canonical Variate Analysis: CVA ...RawData_All

Dataset: RawData_All

Classification criterion: environment

Groups Observations

1. coastal 15
2. continental 8
3. marine 7
4. polar 2

Variation among groups, scaled by the inverse of the within-group variation

	Eigenvalues	% Variance	Cumulative %
1.	2.63784396	55.260	55.260
2.	1.19094784	24.949	80.209
3.	0.94474754	19.791	100.000

Mahalanobis distances among groups:

	coastal	continental	marine
continental	3.3369		
marine	2.6234	4.0703	
polar	4.6819	4.1994	5.0052

P-values from permutation tests (10000 permutation rounds) for Mahalanobis distances among groups:

	coastal	continental	marine
continental	<.0001		
marine	0.0472	0.0008	
polar	0.0133	0.4706	0.0266

Procrustes distances among groups:

	coastal	continental	marine
continental	0.0728		
marine	0.0655	0.1043	
polar	0.1190	0.0998	0.1370

P-values from permutation tests (10000 permutation rounds) for Procrustes distances among groups:

	coastal	continental	marine
continental	0.0085		
marine	0.0877	<.0001	
polar	0.0518	0.0485	0.0245

Phylogenetic mapping

Dataset: PC scores, CovMatrix, RawData_All, Procrustes coordinates

Data type: PC scores

Phylogeny: Phylogeny_RawData_All

Method: weighted squared-change parsimony

The tree is rooted.

Tree length: 0.12889939

Permutation test against the null hypothesis of no phylogenetic signal

Number of randomization rounds: 10000

P-value: <.0001

New Procrustes fit:

Dataset 'RawData_Canals'

256 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.5088436638647192

Tangent sums of squares: 0.499623790655455

Data matrices in this dataset:

- RawData_Canals, raw data
- RawData_Canals, centroid size
- RawData_Canals, Procrustes coordinates

New Procrustes fit:

Dataset 'RawData_Canals'

256 landmarks in 3 dimensions.

The dataset contains 32 observations, of which 32 are included for analyses.

Average shape:

Procrustes sums of squares: 0.5088436638647192

Tangent sums of squares: 0.499623790655455

Data matrices in this dataset:

- RawData_Canals, raw data
- RawData_Canals, centroid size
- RawData_Canals, Procrustes coordinates

Principal Component Analysis: PCA: CovMatrix, RawData_Canals, Procrustes coordinates

Total variance: 0.01611690

Variance of the eigenvalues: 0.0000000341113

Eigenvalue variance scaled by total variance: 0.00013

Eigenvalue variance scaled by total variance and number of variables: 0.10007

Note: throughout all calculations of eigenvalue variances, the dimensionality used was 761.

Please double-check because this dimensionality may not be appropriate for all situations.

Warning: There appear to be fewer PCs than dimensions in shape space. This can have the following reasons, among others:

-- the degrees of freedom are less than the shape dimensionality (sample size, etc.).

-- there is complete integration in the data.

Interpret the results cautiously and check for reasons why this is the case.
