Supplementary Figure S1. Interleukin-6 secretion by HNEC monolayers derived from CRSwNP patients in response to Th17 cytokines. Interleukin-6 secretion (pg/ml) in the basal chamber of HNEC monolayers in ALI cultures exposed to 24 hours of Interleukin-17 (IL-17), Interleukin-22 (IL-22) and Interleukin-26 (IL-26) at 50 ng/ml (low) and 100 ng/ml (high). Medium was used as negative control. The values are shown as means $\pm$ SEM, $n = 5$.
