TITLE: Emergence of different crystal morphologies using the coffee ring effect.

Authors: Kouki Morinaga, Noriko Oikawa, Rei Kurita

(Smovie1) Crystallization dynamics in a sessile droplet between $t = 4665$ s and $t = 5848$ s. A left droplet is a 0.47 wt% droplet including the latex particles, on the other hand, a right droplet is is a 0.47 wt% droplet without the latex particles. This experiment is same as Fig. 2 in the main manuscript.
