6 List of Figures

7	S1	The colour scale illustrates the difference in discharge by sub-basins between FOG	
8		and CEFREM-HR. The percentage for each sub-basin provide the range of the	
9		corresponding relative differences as derived from 95% confidence interval of the	
10		FOG ensemble.	3
11	S2	Relation between the number of GRDC stations available each year over the 1980-	
12		2013 period and the estimated uncertainty for the total discharge into the MED and	
13		BLS.	4

Figure S1: The colour scale illustrates the difference in discharge by sub-basins between FOG and CEFREM-HR. The percentage for each sub-basin provide the range of the corresponding relative differences as derived from 95% confidence interval of the FOG ensemble.

Figure S2: Relation between the number of GRDC stations available each year over the 1980-2013 period and the estimated uncertainty for the total discharge into the MED and BLS.
