Figure-S1. LPS does not induce expressions of TNF and other acute phase protein. hCRP-Luc mice were intraperitoneally injected with sterile PBS, LPS (0.1 μ g/mouse), IL-6 (1 μ g/mouse), or LPS (0.1 μ g/mouse)/anti-IL-6 neutralized mAb (200 μ g/mouse). Sera were collected for determination of adipsin, alpha-2 macroglobulin (A2M), serum amyloid P component (SAP) and TNF as described in Materials and Methods. Data are shown by Means $\pm$ SD (n=4-5/group).
