

Supplementary figure

Figure S1

Characterisation of AmBNSab. **a.** Western blot of adult forager whole brain extract. AmBNSab recognised a protein of approximately 300 kDa. **b.** Western blots of HEK 293 cells transfected with HA-tagged *Apis mellifera* Tet catalytic domain (AmTet_{cat}; 150 kDa) or HA-tagged human Tet catalytic domain (HumTet_{cat}; 100 kDa). AmBNSab failed to detect either HA-tagged Tet protein. Both panels are faithful representation of the original gels with no digital enhancement used. The images show everything that was visible on each gel.

Figure S1.
